30-DAY VERIFIED STATE PILOT AGREEMENT (REGULATED ENVIRONMENT)

Ref: VVU-PIL-PHA-001 Date: [Date] Draft for discussion; each party's attorney should review before signing.

Service Provider: Venture Vision Ubuntu (VVU), [Registered entity name], Reg. [No.], [Address], represented by [Name, Title].
Client: [Legal entity: Aspen Pharmacare / Fresenius Kabi South Africa], Reg. [No.], [Site address], represented by [Name, Title].

1. Objective and Scope

A 30-day pilot in one (1) **non-product-contact zone** (the "Pilot Zone": [cold room / warehouse zone / gowning-area access point]) to capture temperature and humidity excursions, door and access events and alarm-acknowledgement times, and issue tamper-evident, hash-chained receipts to a write-once ledger, **in parallel to** the Client's validated system of record. VVU installs, commissions and removes one (1) edge node with read-only sensors/taps.

2. Regulatory Boundary

The pilot is outside the validated GxP boundary. It produces an independent evidence copy and does not replace, modify or feed any validated system, batch record, deviation, CAPA or release decision. Before commissioning, the Client confirms through its Quality function and change control that the installation is classified as non-GxP. Any move into the validated boundary requires a separate validation plan (risk assessment, URS, IQ/OQ/PQ) and a new written agreement. VVU makes no representation that the receipts satisfy SAHPRA, GMP, ALCOA+ or any data-integrity requirement.

3. Read-Only Principle and Client Obligations

The edge node is passive and read-only; it does not write to, control or alter any HVAC, BMS, monitoring or validated system. Within 5 business days of signing the Client provides site access, mounting points, power and a segregated network port; nominates one technical, one Quality and one commercial contact; completes its own safety, IT/OT, QA and change-control approvals; and provides at least 30 prior days of excursion history.

4. Good-Faith Deposit (5%)

(a) The Client pays a good-faith deposit of **5% of the Projected Annual Subscription Value**. The Projected Annual Subscription Value is fixed at signing as R[Amount] excl. VAT per year; the deposit is therefore R[Amount] excl. VAT, payable before installation. (b) If the Client signs an Annual Subscription within 14 days after Day 30, the deposit is **credited in full** against the first invoice. (c) If the Client cancels before installation, the deposit is refunded less documented hardware and mobilisation costs. If the Client cancels after installation without cause, the deposit is retained to cover deployment costs. (d) If VVU is unable to commission the pilot through no fault of the Client, the deposit is refunded in full. (e) Hardware remains VVU property and is removed on conclusion.

5. KPI Sign-Off (2 of 3 required)

The pilot is successful if two of the three KPIs below are met, measured from VVU ledger data and the chain-verification report against the baseline agreed in writing at commissioning. Client-side outages, denied access or data gaps outside VVU's control extend the pilot day-for-day and are not a VVU failure. Success creates no obligation to subscribe; the Client agrees to consider conversion in good faith.

KPI	Target	Measurement method	Result (Met / Not met)	VVU initials	Client initials
1. Excursion-to-receipt time	At least 95% of excursions receipted within 2 minutes	Ledger timestamps vs. source event timestamps			
2. Evidence retrieval	A complete excursion evidence file is retrievable by the Client's QA within 10 minutes of request, in [N] timed test requests	Timed retrieval test witnessed by QA			
3. Reconciliation	100% of excursions in the Client's existing monitoring system have a matching ledger receipt	Reconciliation report			

Deviation-rate and batch-release-time effects are not measured in this pilot and no such outcome is claimed.

6. Records and Retention

VVU deletes or destroys no record that the Client must retain. Any deletion happens only on the Client's written instruction after the Client has confirmed its own retention obligations. The Evidence Pack and ledger records generated remain with the Client.

7. Data Protection (POPIA)

The Client is the Responsible Party and VVU the Operator (POPIA ss. 19-21). **Default: no personal information in scope.** If access events are added by signed Variation Form, staff are represented by pseudonymous tokens, no biometric data is captured, and the Client confirms lawful basis first. Processing location: [South Africa only]. Security compromise is notified within [48] hours.

8. Liability

The pilot is a monitoring and evidence service with no guarantee of product quality, batch release, regulatory or compliance outcomes. VVU's aggregate liability is capped at the deposit paid, except for gross negligence, wilful misconduct or liability that cannot be limited by law. Neither party is liable for indirect or consequential loss. VVU holds [insurance cover: R amount] and will provide a certificate on request.

9. Term, Confidentiality and IP

Runs 30 days from installation. Either party may terminate for uncured material breach on 7 days' written notice; VVU then removes its hardware and the Client keeps the evidence already generated. Non-public information stays confidential for 3 years after expiry (a separate mutual NDA, if signed, prevails on confidentiality). VVU retains all IP in its software, ledger architecture and firmware; the Client retains ownership of its data. No public use of either party's name or logo without written consent. Governing law: Republic of South Africa; disputes by good-faith escalation (14 days), mediation, then the courts of [jurisdiction]. Entire agreement; amendments only by signed Variation Form.

Acceptance
