30-DAY VERIFIED STATE PILOT AGREEMENT (AUTOMOTIVE)

Ref: VVU-PIL-AUT-001 Date: [Date] Draft for discussion; each party's attorney should review before signing.

Service Provider: Venture Vision Ubuntu (VVU), [Registered entity name], Reg. [No.], [Address], represented by [Name, Title].

Client: [Legal entity: Volkswagen Group South Africa / Isuzu Motors South Africa / Tier-1 supplier], Reg. [No.], [Plant address], represented by [Name, Title].

1. Objective and Scope

A 30-day pilot on one (1) line, cell or station at [Plant] (the "Pilot Line", identified at commissioning) to capture state transitions, line-stop and andon events with duration, reject and unit counts, and energy (kWh) readings, and issue tamper-evident, hash-chained receipts to a write-once ledger, including kWh-per-unit. VVU installs, commissions and removes one (1) edge node with read-only sensors/taps.

2. Read-Only Principle

The edge node is passive. It does not write to, control, interlock or alter any PLC, robot, andon or system on the Pilot Line, and does not replace any system of record (MES, energy or quality systems).

3. Client Obligations

Within 5 business days of signing: site access, mounting points, power and a segregated network port; one technical and one commercial contact; completion of the Client's own safety, IT/OT security and change-management approvals (and any approval its customer or group requires); and at least 30 prior days of baseline data where available.

4. Good-Faith Deposit (5%)

(a) The Client pays a good-faith deposit of **5% of the Projected Annual Subscription Value**. The Projected Annual Subscription Value is fixed at signing as R[Amount] excl. VAT per year; the deposit is therefore R[Amount] excl. VAT, payable before installation. (b) If the Client signs an Annual Subscription within 14 days after Day 30, the deposit is **credited in full** against the first invoice. (c) If the Client cancels before installation, the deposit is refunded less documented hardware and mobilisation costs. If the Client cancels after installation without cause, the deposit is retained to cover deployment costs. (d) If VVU is unable to commission the pilot through no fault of the Client, the deposit is refunded in full. (e) Hardware remains VVU property and is removed on conclusion.

5. KPI Sign-Off (2 of 3 required)

The pilot is successful if two of the three KPIs below are met, measured from VVU ledger data and the chain-verification report against the baseline agreed in writing at commissioning. Client-side outages, denied access or data gaps outside VVU's control extend the pilot day-for-day and are not a VVU failure. Success creates no obligation to subscribe; the Client agrees to consider conversion in good faith.

KPI	Target	Measurement method	Result (Met / Not met)	VVU initials	Client initials
1. Evidence latency	At least 95% of line-stop and andon events receipted within 2 minutes of the event	Ledger timestamp vs. source event timestamp			
2. Energy receipt continuity	At least 99% of production hours carry a kWh-per-unit receipt; every gap logged with cause	VVU chain-verification report			
3. Event completeness	Line-stop and andon log reconciles to the Client's MES/shift log within +/-5%	Reconciliation report			

kWh-per-unit trend and line-stop duration versus baseline are reported for information and are not success criteria; a 30-day pilot without process intervention is unlikely to produce statistically defensible changes.

6. Reporting Statement

Receipts record measured readings and events. They are not an emissions declaration, carbon-footprint calculation or certification, and VVU makes no representation that they satisfy any customer, regulator, border-carbon or supplier-reporting requirement.

7. Data Protection and Third-Party Information

The Client is the Responsible Party and VVU the Operator (POPIA ss. 19-21). **No personal information is in scope.** Adding any requires a signed Variation Form and the Client's written confirmation of lawful basis. The Client confirms that no customer-confidential drawings, specifications or OEM-restricted data are captured, and that it may lawfully share the data in scope. Processing location: [South Africa only]. Security compromise is notified within [48] hours.

8. Liability

The pilot is a monitoring and evidence service with no guarantee of production, quality or compliance outcomes. VVU's aggregate liability is capped at the deposit paid, except for gross negligence, wilful misconduct or liability that cannot be limited by law. Neither party is liable for indirect or consequential loss. VVU holds [insurance cover: R amount] and will provide a certificate on request.

9. Term, Confidentiality and IP

Runs 30 days from installation. Either party may terminate for uncured material breach on 7 days' written notice; VVU then removes its hardware and the Client keeps the evidence already generated. Non-public information stays confidential for 3 years after expiry (a separate mutual NDA, if signed, prevails on confidentiality). VVU retains all IP in its software, ledger architecture and firmware; the Client retains ownership of its data. No public use of either party's name or logo without written consent. Governing law: Republic of South Africa; disputes by good-faith escalation (14 days), mediation, then the courts of [jurisdiction]. Entire agreement; amendments only by signed Variation Form.

Acceptance
